

EXPERIENCE THE IMPROVED KINGBRIDGE PRESENTATION & MOVIE THEATRE

- **Projector** - Our new 5500 lumens projector delivers crisp picture quality and detailed definition. It is powered to work well with or without high levels of ambient light, ensuring a top-notch viewing experience.
- **Audio** - Our 700-Watt sound system features five channels dedicated to cinema and two to public address or background music. The complete 5-channel surround system places sound effects in the room, while the new speaker system with subwoofers provides enhanced sound quality. We've also added a separate sound system for wireless microphones and background music before and after a presentation or movie.
- **Lectern** - Our fully wired lectern includes an internet connection for reliable livestream video without leaving the stage, making it a powerful tool for presenters. It also features video input to the projector, built-in power, and house light controls.
- **Lighting** - We've added a new dimmable and focused performance quality spotlight and lighting control from both the lectern and the theatre landing.
- **Screen** - Our 12x8 foot screen features an excellent reflective polycarbonate screen design.
- **The Room** - Our newly designed theatre features "theatre quality" fabric walls to remove echo and reverb and curved walls that enhance bass response. It is also well-insulated to remove all sound leakage in or out of the room and includes thirty-eight comfortable fixed seats.
